

- How to handle time dimension, i.e. time differentiates IV and DVs – separate major processes
- Keep IVs and DVs separate.
- Feature Developments
- There may be a case where certain exclusions are tied to a dependent variable, especially when there are multiple dependent variables
- For imputed values, it might be best to put the impute in the bootstrap loop for training ... but this defeats the purpose of creating a feature specification.
- All the while collect meta-parameters.
- Treat like a make file.
- Process optimize using DOE.
